disease, autoimmune hemolytic anemia, sterility, myasthenia gravis, multiple sclerosis, Basedow's disease, thrombopenia purpura, insulin dependent diabetes mellitus, allergy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, hepatitis (fulminant, chronic, viral (B, C or D) or alcoholic), and transplant rejection. (I) selectively inhibit apoptosis in normal cells but selectively induce it in abnormal cells. They bind to both human and murine Fas, so can be evaluated in murine disease models. (I) act on the active site of Fas, i.e. they mini the native ligand, do not induce liver disease, and have reduced risk of inducing a human anti-murine antibody response. This sequence encodes a humanised anti-Fas antibody HFE7A heavy chain construct HHH type which is described in the method of the invention.
                                                                                                                                                                                                                                                                             immunomodulatory, dermatological, immunosuppressive, thyromimetic, antirheumatic, nephrotropic, antirhertility, neuroprotective, antirheumatic, nephrotropic, antirhertility, neuroprotective, antiarteriosclerotic, cardiant and hepatropic activity. (I) induce apoptosis by binding to cell surface Fas or inhibit it by competitive inhibition of ligand binding. (I) are used to treat and/or prevent diseases associated with the ras/Fas ligand system, especially systemic lupus erythematosus, Hashimoto disease, rheumatoid arthritis graft versus host disease, Sjorgen's syndrome, pernicious or hypoplastic anemia, Addison's disease, scleroderma, Goodpasture syndrome, Crohn's antirious or disease, Sjorgen's syndrome, pernicious or hypoplastic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        anti-allergic; anti-arthritic; antiviral; immunomodulatory; cardiant; dermatological; immunosuppressive; thyrominetic; antirheumatic; anti-Fas; nephrotropic; antiinfertility; neuroprotective; antiarteriosclerotic; hepatotropic; humanized; apoptosis; systemic lupus erythematosus; Hashimoto disease; rheumatoid arthritis; graft versus host disease; Sjorgen's syndrome; enemia; Addison's disease; scleroderma; sterility; Goodpasture syndrome; Crohn's disease; sterility; myasthenia gravis; multiple sclerosis; Basedow's disease; thrombopenia purpura; allergy; insulin dependent diabetes mellitus; arteriosclerosis; myocarditis; cardiomyopathy; glomerulonephritis; hepatitis; transplant rejection; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  molecule (I) that, induces apoptosis in cells with an abnormal Fas/Fas ligand system, by binding to Fas on the sell surface, and prevents apoptosis in cells with a normal system, by inhibiting binding between Fas and its ligand. The products of the invention have anti-inflammatory, anti-anemic, antidiabetic, anti-allergic, anti-arthritic, antiviral,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     30-SEP-1998;

Conjugates of antibody fragments which bind the human interleukin (II) 8 with a nonproteinaceous polymer can be used for treating inflammatory disorders e.g. acute lung injury, ischaemic reperfusion disorder, and autoimmune diseases. They can also be used for treating e.g. inflammatory skin diseases. They can also be used atopic dermatitis, systemic scleroderma and sclerosis, and asthmatic diseases. The conjugates can also be used as reagents in an animal model system for in vivo study of the biological functions of the antigen recognised by the conjugate. The present sequence represents the DNA sequence of the plasmid p6G4V11N35A.choSD9 from the present inventions.

(MAb). The anti-IL-8 MAb comprises a sequence containing the CDRs (complementarity determining regions) of the humanized anti-IL-8 (664.2.5V11N35A light chain; and amino acids 24-253 of the humanized anti-IL-8 (664.2.5V11N35A heavy chain. The anti-IL-8 MAbs and fragments can be used in diagnosis, for affinity purification of IL-8 from recombinant cell culture or natural sources and for the treatment of inflammatory disorders e.g. adult respiratory distress syndrome.                                  Chain (see AAM83037) of murine anti-human Fas monoclonal antibody
CC Chain (see AAM83037) of murine anti-human Fas monoclonal antibody
CF PERM amplification (see AAV70115-17), and includes humanising R44G
CC and A76T amino acid substitutions. Host cell Escherichia coli
CF pgHPDHV3 SANK 70298 harbors plasmid pgHPDHV3 carrying a fusion
CF fragment of the humanised HV type HFE7A heavy chain and DNA
CF producing human IgG1 constant region, and is deposited as
CF PERM BP-6273 (claimed). The invention provides methods for
CF producing humanised antibodies by culturing host cells. Humanised
CF producing humanised antibodies by culturing host cells. Humanised
CF producing humanised antibodies by culturing host cells. Humanised
CF producing apoptosis in abnormal cells expressing Fas, and of
CF inhibiting Fas-induced apoptosis in normal cells. The humanised
CF inhibiting Fas-induced apoptosis in normal cells. The humanised
CF inhibiting Fas-induced apoptosis in normal cells. The humanised
CF inhibiting Fas-induced apoptosis in normal cells. The humanised
CF inhibiting Fas-induced apoptosis in normal cells. The humanised
CF inhibiting Fas-induced apoptosis in normal cells. The humanised
CF inhibiting Fas-induced apoptosis in normal cells. The humanised

or diseases caused by an abnormality in the Fas/Fas ligand system containing an anti-Fas antibody as the active component. The anti-Fas antibody is either the murine anti-human Fas monoclonal antibody HFE7A, or a humanised version of HFE7A containing identical CDRs (complementarity determining regions) to antibody HFE7A. Via its (not complementarity determining regions) to antibody HFE7A. Via its interaction with Fas, the antibody of the invention acts as a modulator of apoptosis. The compositions of the invention may therefore be used in the treatment or prevention of conditions such as autolimune diseases, allergy, atopy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, aplastic anaemia (panmyelophthisis), hepatitis, and organ graft rejection. Sequences AAA72146, AAA72159 and AAA72184 represent DNA encoding the heavy chains (or fragments thereof) of various humanised HFE7A-derived anti-Fas antibodies. invention relates 6 compositions for the prevention or treatment

cc immunomodulatory, dermatological, immunosuppressive, thyromimetic, cardiant and hepatropic activity. (I) induce cardiant and hepatropic activity. (I) induce capoptosis by binding to cell surface Fas or inhibit it by competitive inhibition of ligand binding. (I) are used to treat and/or prevent cdiseases associated with the Fas/Fas ligand system, especially systemic lipus erythematosus, Hashimoto disease, rheumatoid arthritis, graft versus host disease, Sjorgen's syndrome, pernicious or hypoplastic anemia, Addison's disease, scleroderma, Goodpasture syndrome, Crohn's clisease, autoimmune hemolytic anemia, sterility, myasthenia gravis, cardiomyopathy, glomerulonephritis, hepatitis (fulminant, chronic, viral (B, C or D) or alcoholic), and transplant rejection. (I) selectively inhibit apoptosis in normal cells but selectively induce it in abnormal cells. They bind to both human and murine Fas, so can be evaluated in murine disease models. (I) act on the active site of Fas, i.e. they mimic the native ligand, do not induce liver disease, and have reduced risk of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         anti-allergic; anti-arthritic; antiviral; immunomodulatory; cardiant; dermatological; immunosuppressive; thyrominetic, anti-fras; nephrotropic; antiinfertility; neuroprotective; antiarteriosclerotic; hepatotropic; humanized; apoptosis; systemic lupus erythematosus; hepatotropic; humanized; apoptosis; systemic lupus erythematosus; slepatotropic; humanized; apoptosis; systemic lupus erythematosus; sjorgen; syndrome; anemia; Addison; s disease; scleroderma; sterility; syotrome; crohn; disease; sterility; myasthenia gravis; multiple sclerosis; Basedow; sdisease; thrombopenia purpura; allergy; insulin dependent diabetes mellitus; arteriosclerosis; myocarditis; insulin dependent diabetes mellitus; arteriosclerosis; myocarditis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         modecule (I) that, induces apoptosis in cells with an abnormal Fas/Fas ligand system, by binding to Fas on the cell surface, and prevents apoptosis in cells with a normal system, by inhibiting binding between Fas and its ligand. The products of the invention have anti-inflammatory,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       30-SEP-1998;

CC immunomodulatory, dermatological, immunosuppressive, thyronimetic, cardiant and hepatropic activity. (I) induce cantirheumatic, nephrotropic, antiinfertility, neuroprotective, cantirheumatic, nephrotropic, antiinfertility, neuroprotective, cc antirheumatic, nephrotropic, antiinfertility, neuroprotective, cc antirheumatic, nephrotropic, antiinfertility, neuroprotective, cc antirheumatic to cell surface Fas or inhibit it by competitive cc inhibition of ligand binding. (I) are used to treat and/or prevent cc diseases associated with the Fas/Fas ligand system, especially systemic cc lupus erythematosus, Hashimoto disease, rheumatoid arthritis, graft cc versus host disease, Sjorgen's syndrome, pernicious or hypoplastic cc anemia, Addison's disease, scleroderma, Goodpasture syndrome, Crohn's cc disease, autoimmune hemolytic anemia, sterility, myasthenia gravis, cc multiple sclerosis, Basedow's disease, thrombopenia purpura, insulin cc dependent disbetes mellitus, allergy, arteriosclerosis, myocarditis, cc disease, allergy, arteriosclerosis, myocarditis, cc disease, allergy, arteriosclerosis, myocarditis, cc disease, allergy, arteriosclerosis, myocarditis, cc inhibit apoptosis in normal cells but selectively induce it in abnormal cc inhibit apoptosis in normal cells but selectively induce it in abnormal cc inhibit apoptosis in normal cells but selectively induce it in abnormal cc inhibit apoptosis in normal cells but selectively induce it in abnormal cc inhibit apoptosis in normal cells but selectively induce it in abnormal cc inhibit apoptosis in normal cells but selectively induce it in abnormal cc inhibit apoptosis in normal cells but selectively induce it in abnormal cc inhibit apoptosis in normal cells but selectively induce it in abnormal cc inhibit apoptosis in normal cells but selectively induce it in abnormal cc inhibit apoptosis in normal cells but selectively induce it in abnormal cells in the mathody response. This sequence encodes c humanised anti-Fas antibody heavy chain construct designated Heu 3 whi

The products of the invention have anti-inflammatory,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New humanized anti-Fas antibody, useful for inflammatory or autoimmune disease, induces cells with abnormal Fas-Fas ligand systems
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 35; Page 177-180; 263pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              molecule (I) that, induces apoptosis in cells with an abnormal Fas/Fas ligand system, by binding to Fas on the cell surface, and prevents apoptosis in cells with a normal system, by inhibiting binding between Fas and its ligand. The products of the invention have anti-inflammatory, anti-anchic, antidiabetic, anti-allergic, anti-arthritic, antiviral, incomplete the system of the system of the system of the system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New humanized anti-Fas antibody, useful for inflammatory or autoimmune disease, induces cells with abnormal Fas-Fas ligand systems
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 33;

apoptosis

selectively

```
cc antirheumatic, nephrotropic, antiinfertility, neuroprotective, cardiant and hepatropic activity. (I) induce capoptosis by binding to cell surface Fas or inhibit it by competitive clinibition of ligand binding. (I) are used to treat and/or prevent cd diseases associated with the Fas/Fas ligand system, especially systemic culture erythematosus, Hashimoto disease, Indunatodia arthritis, graft cursus host disease, Sorgen's syndrome, pernicious or hypoplastic canemia, Addison's disease, scleroderma, Goodpasture syndrome, Crohn's cdisease, autoimmune hemolytic anemia, sterility, myasthenia gravis, cultiple sclerosis, Basedow's disease, thrombopenia purpura, insulin cdependent diabetes mellitus, allergy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, hepatitis (fulminant, chronic, viral (B, C or D) or alcoholic), and transplant rejection. (I) selectively inhibit apoptosis in normal cells but selectively induce it in abnormal cells. They bind to both human and murine Fas, so can be evaluated in murine disease models. (I) act on the active site of Fas, i.e. they mimic clinibit apoptosis in normal cells but selectively induce it in abnormal cells. They bind to both human and murine Fas, so can be evaluated in the native ligand, do not induce liver disease, and have reduced risk of inducing a human anti-murine antibody response. This sequence encodes a humanised anti-Fas antibody heavy chain construct designated Heu 2 which is described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention describes a novel humanized anti-Fas antibody-like molecule (I) that, induces apoptosis in cells with an abnormal Fas/Fas ligand system, by binding to Fas on the cell surface, and prevents apoptosis in cells with a normal system, by inhibiting binding between Fas and its ligand. The products of the invention have anti-inflammatory, anti-anemic, antidiabetic, anti-allergic, anti-arthritic, antiviral, instruments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      immunomodulatory, dermatological, immunosuppressive, thyromimetic,

                                                                                                                                                                                                                                                                                                                                                                                                                                                          142
```

This is the DNA sequence of vector plasmid p6G4V11N35A.choSD.9 encoding a humanised 6G4V11N35A IgG (see ANA69316) containing complementarity determining regions of murine anti-interleukin-8 (IL-8) monoclonal antibody (MAD) 6G5.2.5 (see ANA69309-10) in a human template. The plasmid has a pSVI backbone. Humanised anti-IL-8 MADs (see ANA69301-04) are described for use in diagnostic applications and in the treatment of inflammatory disorders. The invention provides conjugates of an antibody fragment and a polymer, such as PEG, that have improved half-life, mean residence time, and/or clearance rate. The conjugates can be used for immune
